VOLVE FIELD | Executive Summary

Reporting Period : 1-Sep-07 to 1-Dec-16

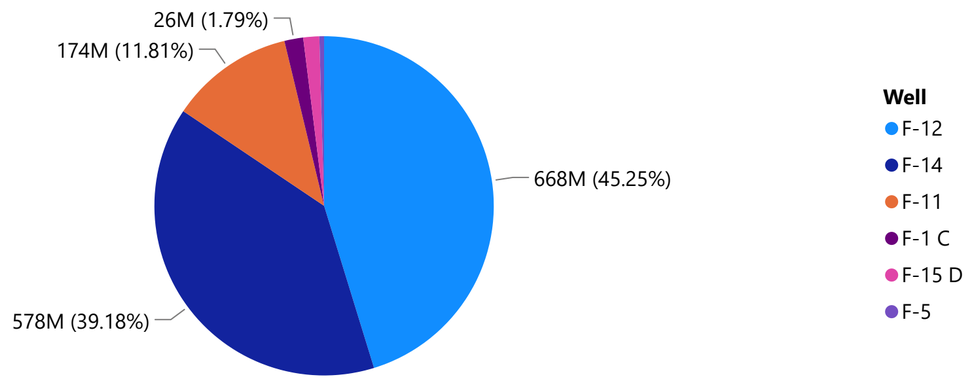

Total Oil Production	Total Gas Production	Total Water Production	Total Water Injection	Avg Daily Oil Production
10M	1bn	15M	30M	3.28K

Injector Wells	Producer Wells	Top Performer Well
2	5	F-12 (Oil & Gas)

Total Oil Produced by Well

Total Gas Produced by Well

Executive Insight:

Total oil production reached 10,037,081 Sm³ during the selected period. Well F-12 was a major contributor to oil and gas production during 2007 to 2016; therefore, its performance warrants being a primary focus of surveillance and reliability activities. Water production declined in 2016 Q3 when compared against the asset's average quarterly performance.

VOLVE FIELD | Production & Injection Performance

Well: All | Year: All | Month: All

Reporting Period : 1-Sep-07 to 1-Dec-16

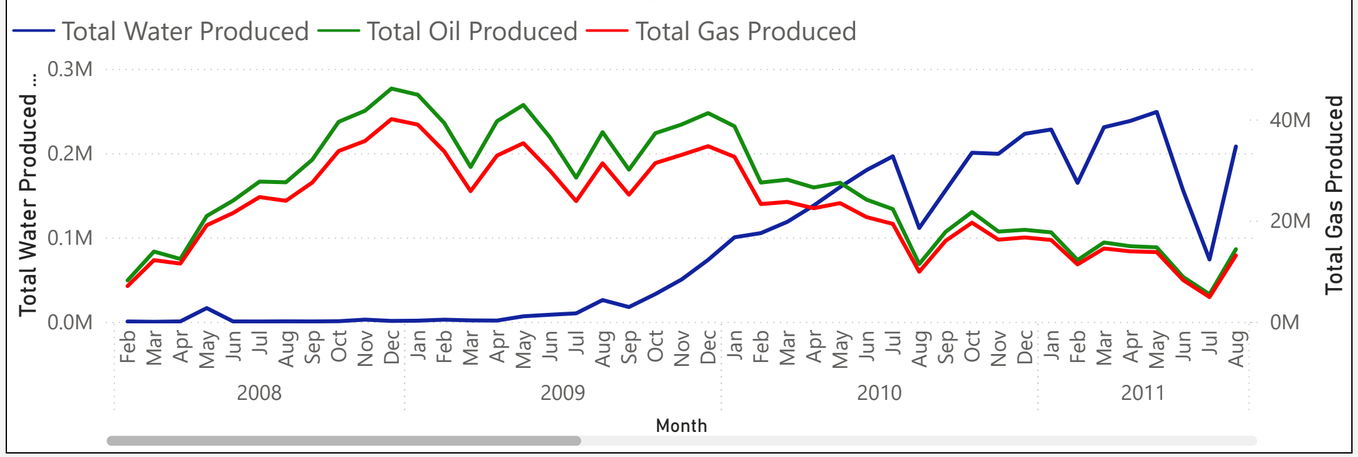

Avg Daily Oil Production
3.28K

Average of Water Cut
60.41%

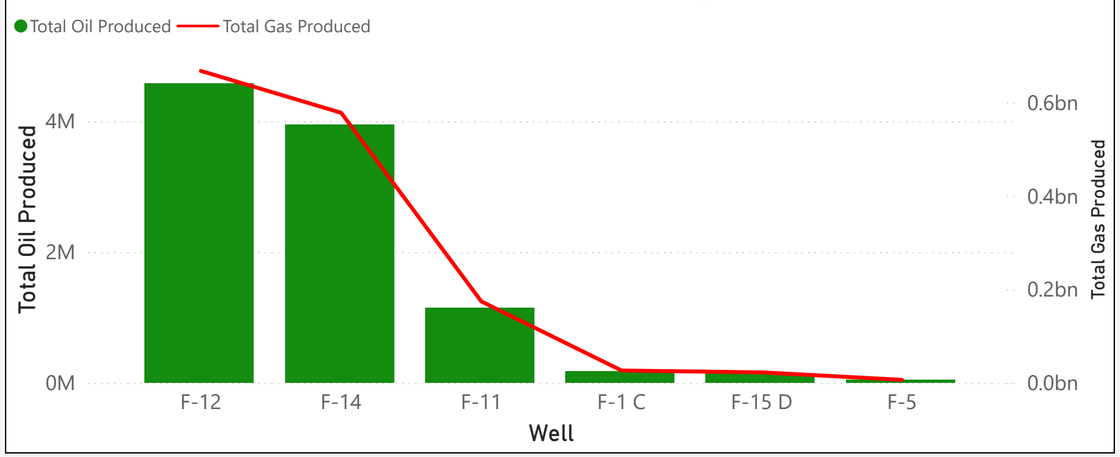

Average Oil to Water Ratio
65.52%

Avg Daily Prod. per Active Well
1.56K

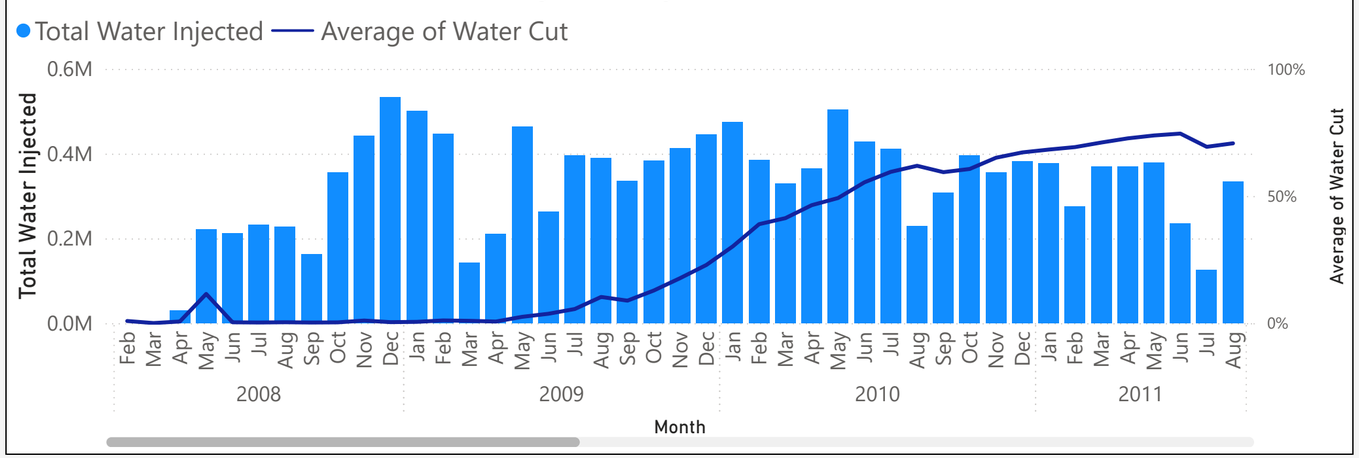

Monthly Production

Total Oil and Gas Produced by Well

Monthly Water Injection vs Water Cut

Insight:

With oil production declining at 3.7% and gas production at 3.6%, implementing a water injection sweep is critical to mitigate further pressure drop and maximize recovery.
F-12 contributed 45.6% of total oil production and 45.2% of total gas production.
The asset maintained an average monthly injection volume of 270,805 to support reservoir pressure.

KPI Summary

- Oil Production: 10,037,081 Sm3
- Gas Production: 1,475,370,436 Sm3
- Water Cut: 60.4%
- Oil to Water Ratio: 65.5%
- Producer: 5 wells
- Injector: 2 wells
- Oil Decline Rate: 3.7%
- Gas Decline Rate: 3.6%

Production Opportunity Matrix

Top Declining Wells

Business Insights:

At 64.37%, F-14 had the highest Average of Water Cut and was 160.14% higher than F-5, which had the lowest Average of Water Cut at 24.74%.

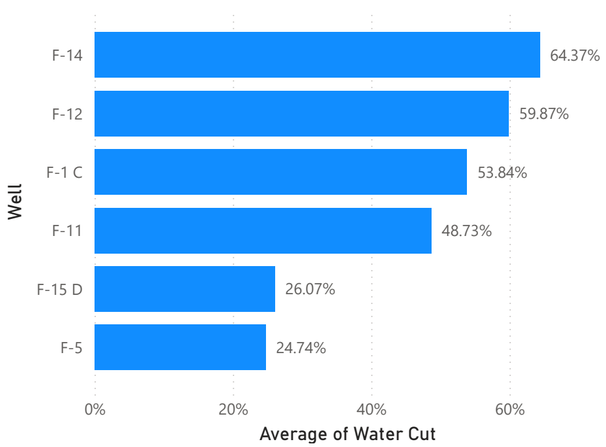

Across all 6 Well, Average of Water Cut ranged from 24.74% to 64.37%.

F-1 C had the highest Exponential Decline Oil Rate (11.7%) and F-14 had the highest Average of Water Cut (64.37%).

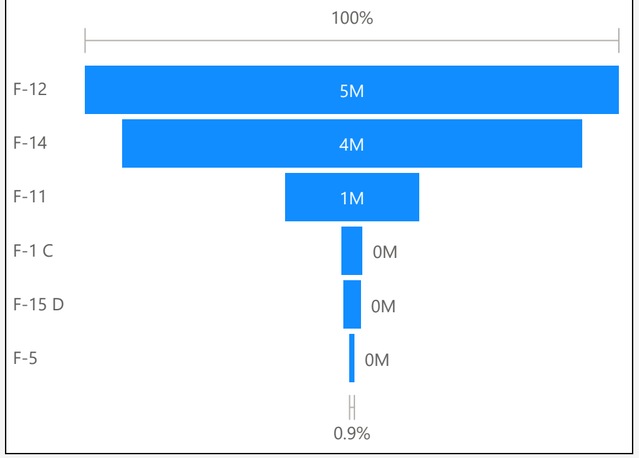

Oil and total Gas are positively correlated with each other.

Gas and Oil diverged the most when the Well was F-5, when Gas were 1.1% higher than Oil.
